

PicoSign ePaper  
multiple displays  
and eWalls

## PicoSign - We create your ePaper signage Wall

**EASY MAINTENANCE - AVAILABLE IN ALL SIZES**

### 5 REASONS FOR USING PICO SIGN EPAPER SIGNAGE WALL

1. **UPDATES IN SECONDS**
2. **ACCESS VIA INTERNET, ANYWHERE**
3. **SAVES ENERGY**
4. **EASY REMOTE UPDATES**
5. **CALM AND EASY TO READ**

With the PicoSign server you can access your displays from anywhere in the world. The ultra low power displays only need power for uploading and updating your images. The display generates no light and has very good readability from any viewing angle and in most lighting conditions.

### PICO SIGN IS... UNIVERSAL

With the different methods to connect the display panels to the Internet and the ease of interfacing software, there will be a PicoSign solution for any of your signage needs. It can be used for large scale signage for conference rooms, offices or hospitals. The use of PicoSign display is only limited by the imagination.

PicoSign has already been implemented in some surprising ways.

The company offers a variety of custom designs and choices of wireless protocols, power supplies, functionality and casing. One of the best examples is the PicoSign Wall at United Nations headquarters in New York

### EASY TO USE

Create an image for the eWall, then send the image to the displays via Internet. That's it!

### PICOSIGN : MANY OPTIONS – A SINGLE APPROACH

- Multiple display & tiling possibilities
- Internet connectivity with one user interface and a suitable connection
  - Wired connection - Power over Ethernet (POE): the minimal installation solution
  - GSM/GPRS for long distance connectivity like outdoor applications
- Any application can generate an image for the displays
- Images are distributed to the displays through PicoSign webserver
- PicoSign comes with a free cloud server, local server installations are optional
- High level of internal security measures to block hackers & eavesdroppers.
